

ULTRA SEAL-TG®

DESCRIPTION:

Ultra Seal-TG® is a specific micro sized cellulose fibers, compatible with both water and oil base mud systems.

USES:

- | | |
|----------------------------------|-----------------------------------------|
| SEEPAGE CONTROL | SEALING MICRO FRACTURED SHALES |
| TORQUE AND DRAG REDUCTION | DIFFERENTIAL STICKING PREVENTION |

FEATURES:

Ultra Seal-TG® is designed to aid in the control of fluid losses to the well bore, as well as promote the anti-friction characteristics of a drilling fluid.

Ultra Seal-TG® seals of low pressure zones, which in turn reduces rotary torque and drill string drag that is present in these differential pressure environments.

Ultra Seal-TG® inhibits seepage loss to the formation, as well as restricting flow into depleted sands.

TREATMENT:

Ultra Seal-TG® is used in concentrations of 11.4 kg/m³ to 71.3 kg/m³.

PACKAGING:

11.36 Kilogram net in multi-wall paper bags.
(48 bags per 44"X44" pallet)
